

SIMPLY BEAUTIFUL DATA SECURITY

It's child's play to use

+ SIMPLY BEAUTIFUL DATA SECURITY

Everything is running as it did before
– only it's safe now.

Nowadays, all organisations depend on data. Data loss, due to theft or carelessness, can damage organisations, even causing them to fail (as testament to recent high profile cases).

Most security vendors and software providers advise you to protect yourself as comprehensively as possible against all risks - irrespective of whether these risks are relevant to your business. This makes absolutely NO sense to us!

Why BLINDLY and expensively protect yourself across the board?

Surely the first step is to UNDERSTAND your organisation's data security situation. Only then can you efficiently and effectively PROTECT yourself against the risks specific to your organisation.

The real benefit about EGOSECURE and what sets us apart from the rest is that we automate the investigation and remediation for you.

Our INSIGHT module provides all the data security information about your network.

Our INTELLACT module then uses this information to determine exactly what protection you require. The protective measures with the EGOSECURE protection modules can then be set up and adapted to your situation – and even automated.

Current market drivers such as GDPR, industrial espionage, compliance, cloud security and industry 4.0, all find that there is an effective and efficient solution within EGOSECURE's product portfolio.

94%

of our clients evaluate our product as the best on the market.

97%

of our clients say that our product has completely solved their problems.

92%

of our clients say that our product has the best usability.

Don't just take our word that our solutions are effective, simple to implement and manage, read what our customers say:

All-in-one solution for your data security

"All EGOSECURE's functionality is integrated into one simple to use package; unlike other major software producers that require you to buy many individual products. All of its (EGOSECURE) components integrate in a very effective manner."

Jürgen Munk, IT-Director GroupM

Reliable system protection in the background

"With EGOSECURE, we have found a professional security solution that protects our entire client landscape from unauthorised data leakage without interfering with our employees' day-to-day work."

UniVersa Lebensversicherungen AG

Tailored to our company's needs

"EGOSECURE was the first company to meet our requirements because it offers a solution that is highly customisable and compatible."

Klaus Thomas, Stadtverwaltung Baden-Baden

Insight

This module is the foundation of any security stance. It ensures that protective measures are not blindly setup, but implemented according to your organisation's specific needs.

It is here that information on the data security of your network is collated and clearly displayed in easy to read and understand, graphs and tables.

The module determines what protective measures are necessary for the initial installation. Insight then constantly monitors your company's ongoing protection requirements. This gives you all the information that management and administrators need to take any necessary action.

IntellAct

Our new IntellAct module analyses the information generated by the Insight module, then automatically activates protective measures based on pre-defined rules.

It automatically detects anomalies and critical situations, so that an appropriate response is triggered to protect your organisation's data.

This automated workflow significantly reduces reaction times and helps administrators to be more productive, greatly reducing repetitive and manual tasks.

Protection

The protective measures in EgoSecure Data Protection are based on our tried-and-tested **C.A.F.E.** Management methodology. This security methodology, focusing on all devices and data paths, solves data security challenges through the intelligent integration of: **C**ONTROL, **A**UDIT, **F**ILTER and **E**NCRYPTION.

CONTROL: Device Management, Cloud Access Control, Connection Access Control

AUDIT: To ensure IT compliance

FILTER: Content Analysis & Filter, Antivirus, Application Control

ENCRYPTION: Removable Device Encryption, Full Disk Encryption, Pre-Boot Authentication, Folder Encryption, Network Encryption, Cloud Encryption, Permanent Android Encryption, IOS Encryption, Mail Encryption

Complemented by Intelligent central MANAGEMENT

The automation of IT security is constantly being discussed and promoted at security conferences worldwide. While others are still talking about it, **EGOSECURE** is already delivering - with EgoSecure Data Protection 12.

You can find more information about EgoSecure Data Protection 12 at www.egosecure.co.uk

Very low administrative workload

"We were convinced by the easy administration and the high degree of transparency it offers our users. Its product philosophy is exactly what administrators are looking for."

Peter Lange, State Reservoir Association of Saxony

Ongoing further development in dialogue with clients

"In addition to the product's comprehensive functionality, we were very happy with EgoSecure's close collaboration with us – it exceeded the usual support experience of others."

Michael Kraemer, Criminal Police Office of the State of Saarland (LKA)

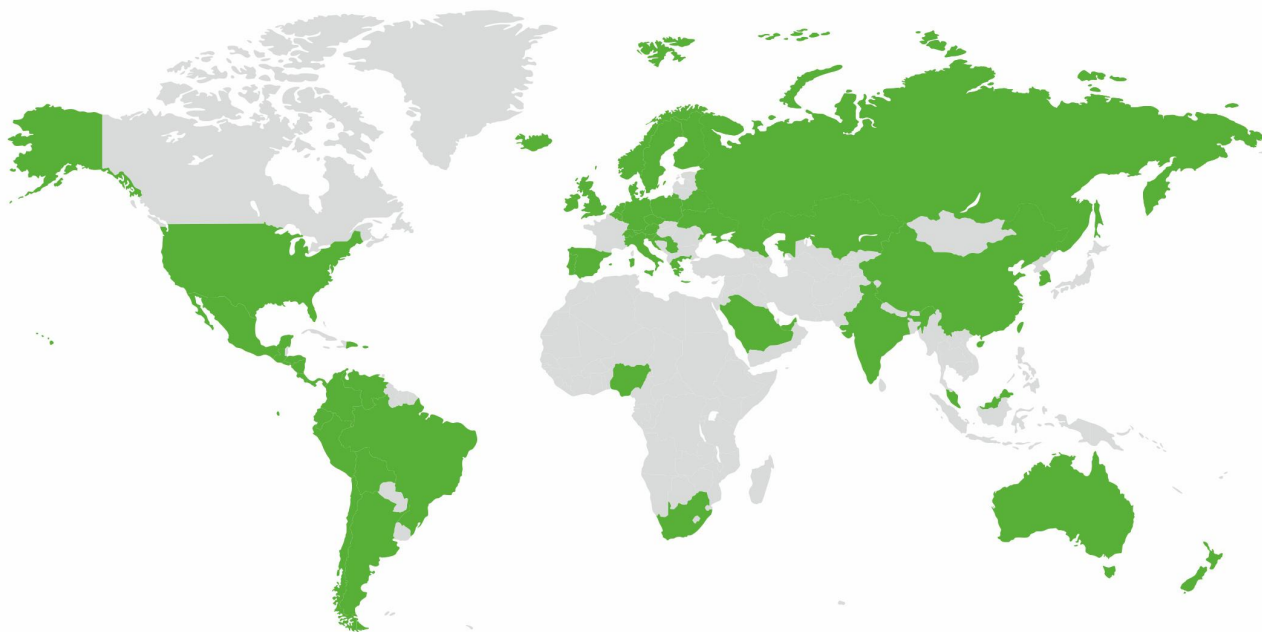

Easy and fast installation, intuitive administration

"With **EGOSECURE**, we have the administration of our end user devices, including mobile, firmly and reliably under control. We were very impressed by how quick and easy it was to install, as well as its clear and intuitive management interface."

Oder-Spree Hospital

+ FACTS

- + 11 years of product development
- + Over 2,100 customers worldwide
- + In more than 42 countries
- + Our biggest installation encompasses 167,000 work stations
- + More than 1.55 million clients protected worldwide
