

Impact, costs and benefits of modern data protection

2020 was a unique year for everyone, and business was no exception. External pressures unknown to our generation have forever changed the IT landscape, creating new challenges for all.

Veeam's Data Protection Report 2021 looked into a recent survey of more than 330 unbiased businesses from the UK and Ireland to understand today's data protection impact, costs and benefits.

The impact of legacy data protection is high

21%

of servers will have at least one unplanned outage

30%

of all backup jobs fail

&

29%

of all restore jobs fail

→

50%

failure of recovery

Can you afford to only recover your critical data half of the time?

COVID-19 had significant impact on IT strategy

IT delivery is under a massive change, as organisations aggressively adopt a more cloud-first approach, putting even more pressure on legacy data protection. Are you ready for this shift?

59%

greater cloud adoption

45%

acceleration in SaaS usage

57%

accelerated hybrid-IT deployment

The drive for modernisation has never been more important

As organisations adopt modern services at a rapid pace, legacy systems cannot keep up. IT leaders are looking for immediate results to solve their critical data protection needs.

34%

to improve RPO and RTO SLAs

33%

to improve reliability of backups

35%

to improve ROI/TCO

35%

to reduce hardware costs

33%

to reduce complexity

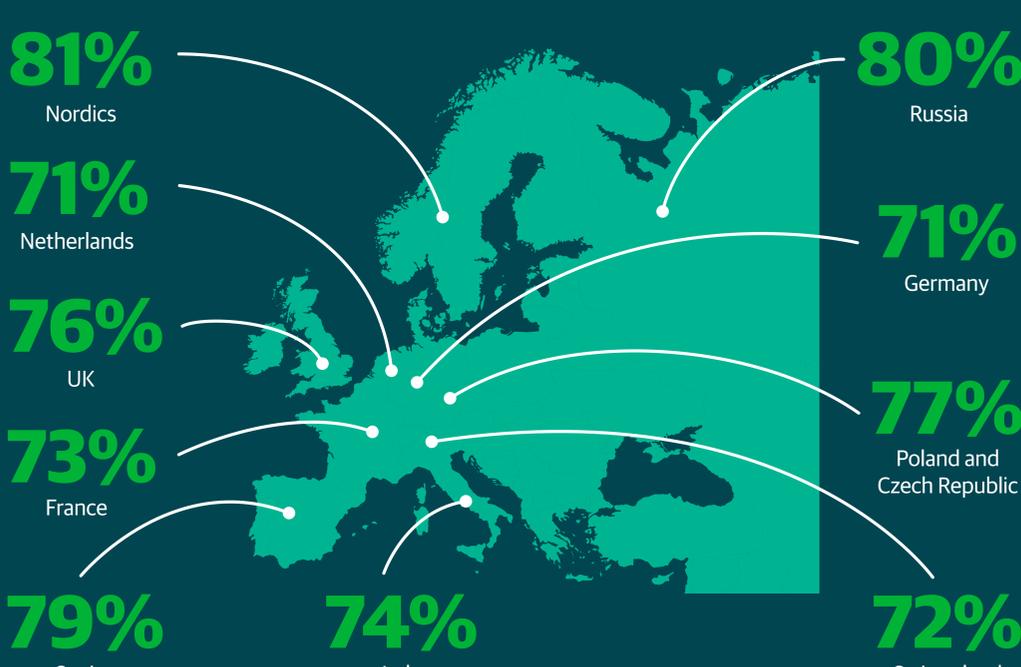

31%

to move data protection to the cloud

The cloud is changing data protection. Are you ready?

Modern data protection is rapidly accelerating through cloud adoption. Globally, organisations are taking advantage of cloud backup for their entire data protection portfolio.

By 2023, a large number of companies will be using cloud first backup – where do you rank?
